Country: Eastern Canada.

Appearance: Blue-grey colored skin, with a slightly lighter colored underside.

Food: Krills.

Why it is endangered: 1- Environmental change. 2- Loss of habitat. 3- Toxics.

Numbers of animals today: About 10,000

Report:

My favourite endangered animal is the Blue Whale. The Blue whale lives in all the world's oceans except the Arctic ocean. They are blue-grey colored skin, with a slightly lighter colored underside. They eat generally krills. They live in pairs, groups or on their own. They are endangered because of loss of habitat, toxics and

Environmental change. There are about  
10,000 Blue whales all over the world.
