

# Fact file

Name: Imperial eagle

Habitat: forest and mountains

Country: Spain

Appearance: it is a bird, it has big wings and it's brown and white

Food:meat

Why it is endangered: because of hunting and poaching

Number of imperial eagles today: 800

## Project

My favourite endangered animal is the imperial eagle.

The imperial eagle lives in the nests. They are brown and white. They eat meat. They are endangered

because of hunting and poaching. There are only about 800 imperial eagles.
