

PROJECT: AN ENDANGERED ANIMAL

Fact File: An endangered animal

Name: Polar bear

Habitat: snow and ice

Country: Poles

Appearance: White fur

Food: Seals, walruses...

Why it is endangered: pollution and global warming

Number of animals today: 20.000

Report: An endangered animal

My favorite endangered animal is the polar bear.

Polar bears live in the snow, at the Poles.

They have white and gray fur.

Polar bears are the most carnivorous bears on the Earth. They eat seals, walruses, carrion...

The polar bears are endangered because of pollution and global warming.

Polar bears are stronger than other bears.

The polar bear is the largest species among bears. Males exceed 500 kg in weight.

Other bears live in the forest and they eat meat, insects, fruits... These bears as well are endangered.

The polar bears are endangered because of pollution, loss of habitat, global warming...

The number of brown bears today is 330.

The number of polar bears today is 20.000
