

iiiTablets !!!

Tablet Project !!!

Hello my name is Nahia. I'm going to present a project of the tablets. I think it is a good invention because you can do a lot of things and I hope you like it.

In 1964 tablets didn't exist. The people listened to music or listened to the news.

In 1968 the first tablet in the world was founded. The inventor was Alan Kay, he was an American.

In the early 2000s, Microsoft began to create more tablets known as cp tablets with the windows operating system.

In 2010, the first iPad known by the Apple brand was formed. Since then, Apple has been developing more and more and now it is the most well-known.

Since 2022 almost nothing has changed. Just more storage, screen warmth and the size.

Now the tables are very elaborate over the years they have been rising in price and that has led to buying more mobiles.

I hope you like my tablets project !!!
