

THE WHEELCHAIR:

Hello! My name is Noa and I'm going to show you my project about wheelchairs. I chose this because I think the wheelchair is a great invention and I want to know more about it.

At the beginning of the 16th century the wheelchair didn't exist but in 1595 the first wheelchair was invented by King Philip II of Spain. He invented it for people who were disabled. Nowadays people can walk better in the street.

After that in 1783, John Dawson of Bath, England, invented a different wheelchair named after the city of Bath. Dawson designed a chair with two large wheels and one small wheel.

One normal wheelchair now costs \$2,399.00, there are a lot of types of wheelchairs but there are some of them.

I hope you like it.
