

The invention of the plane

The inventions of the plane

My invention is about planes. We used the plane to travel. There are many plane companies.

In 1903, the Wright Brothers invented the plane in the United states.

In 1911 the first flight was approved in the EEUU.

In 1919 was the first Antarctic flight between Canada and Ireland.

in 1940 big planes were very popular

In 1945 more than 40000 planes were produced.

In 2022 actually the first cost of commercial planes is the spent of fuel. Tu minimize this cost the first method is reduze the airplane weight.
