

WATCH

The sun and the moon were the first watches in the world. They used to set the time.

In Grecia, in the V century Before Christ, appeared the first watch. This watch was a solar watch.

After that, in a III. century After Christ, appeared the first sand watch. In this watch, the time durations was depend to the sand quantity.

In 1277 year, appeared the first mechanic watch.

Three centuries later, in 1524, Peter Henleinen invented the first pocket watch. This watch was smaller than the other watches.

In 1657, Christiaan Huygens, a Dutch astronomer, invented the first pendulum watch.

The years passed and in XIX century, Louis Berthoud, a Swiss watchmaker, invented the first stopwatch.

In 1920, appeared the first quartz watch and in 1956, the first digital watch.

Finally, in 2009 the most exact watch appeared in the world until today, the optical atomic watch.

This is the watch's evolution until today. Great invention the watch!!!
